S.No: 1

Date: 2023-09-14

Aim:

Write a java program to demonstrate operator precedence and associativity Source Code:

```
import java.util.Scanner;
class OperatorPrecedence {
    public static void main(String[] args) {
        int x,result;
        System.out.print("Enter a num: ");
        Scanner sc=new Scanner(System. in);
        x=sc.nextInt();
        result=x++ +x++*--x/x++- --x+3>>1|2;
        System.out.println("The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2");
        System.out.println("result = "+result);
    }
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1

User Output

Enter a num:

4

The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2

result = 3
```

```
Test Case - 2

User Output

Enter a num:
-3

The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2

result = 2
```

ID: 224G1A0597 Page No: 1

write a java program that uses if-else control statement and print the result **Source Code:**

```
Control.java
import java.util.Scanner;
class Control {
        public static void main(String[] args){
                int x,y,z;
                Scanner sc=new Scanner(System.in);
                System.out.print("Enter first num : ");
                x=sc.nextInt();
                System.out.print("Enter second num : ");
                y=sc.nextInt();
                if(z<20)
                System.out.println("x + y is less than 20");
                System.out.println("x + y is greater than 20");
        }
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter first num :
Enter second num :
x + y is less than 20
```

Test Case - 2
User Output
Enter first num :
24
Enter second num :
10
x + y is greater than 20

Exp. Name: Sample Program to demonstrate S.No: 3 Date: 2023-11-05 constructor

Aim:

Write a program to demonstrate constructor class

Source Code:

```
Student.java
class Student{
        int id;
        String name;
        void display(){
               System.out.println(id+" "+name);
               System.out.println(name);
        public static void main(String[]
        args){
               Student s1=new Student();
               Student s2=new Student();
                s1.display();
               s2.display();
        }
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
0 null
0 null
```

ID: 224G1A0597 Page No: 3

Date: 2023-11-07

Aim:

Write a program to demonstrate destructor class **Source Code:**

DestructorExample.java

```
public class DestructorExample{
    public static void main(String args[]){
        DestructorExample de=new DestructorExample();
        de.finalize();
        de=null;
        System.gc();
        System.out.println("Inside the main() method");
    }
    protected void finalize()
    {
        System.out.println("Object is destroyed by the Garbage Collector");
    }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1

User Output

Object is destroyed by the Garbage Collector

Inside the main() method

Object is destroyed by the Garbage Collector

Aim:

Write Java program on use of Inheritance.

Create a classVehicle

- contains the data members color of String type and speed and size of integer data type.
- write a methodsetVehicleAttributes() to initialize the data members

Create another classCarwhich is derived from the classVehicle

- · contains the data membersccandgearsofintegerdata type
- · write a methodsetCarAttributes()to initialize the data members
- write a methoddisplayCarAttributes()which will display all the attributes.

Write another class InheritanceDemo with main() it receives five arguments color, speed, size, cc and gears. Source Code:

```
InheritanceDemo.java
 import java.util.*;
 class Vehicle {
        String color;
         int speed, size;
          void setVehicleAttributes(String c,String sp,String s) {
                 color=c;
                  size=Integer.parseInt(s);
                   speed=Integer.parseInt(sp);
  class Car extends Vehicle {
         int cc,gears;
          void setCarAttributes(String c,String sp,String s,String cce,String gear){
                 setVehicleAttributes(c,sp,s);
                  cc=Integer.parseInt(cce);
                   gears=Integer.parseInt(gear);
           void displayCarAttributes() {
                 System.out.println("Color of Car : "+color);
                  System.out.println("Speed of Car : "+speed);
                   System.out.println("Size of Car : "+size);
                    System.out.println("CC of Car : "+cc);
                     System.out.println("No of gears of Car : "+gears);
    class InheritanceDemo {
         public static void main(String args[]){
                 Car s= new Car();
                 s.setCarAttributes(args[0],args[1],args[2],args[3],args[4]);
                   s.displayCarAttributes();
        }
    }
```

Execution Results - All test cases have succeeded!

	Test Case - 1
User Output	
Color of Car : Blue	
Speed of Car : 100	
Size of Car : 20	
CC of Car : 1000	
No of gears of Car : 5	

Test Case - 2
User Output
Color of Car : Orange
Speed of Car : 120
Size of Car : 25
CC of Car : 900
No of gears of Car : 5

Exp. Name: write a java program to prevent inheritance using abstract class.

Date: 2023-11-06

Aim:

S.No: 12

write a java program to prevent inheritance using abstract class.

- · Create an abstract class Shape
- Create a class Rectangle which extends the class Shape
- Class Rectangle contains a method draw which prints drawing rectangle
- Create another class circle1 which extends Shape
- Class circle1 contains a method **draw** whih prints **drawing circle**
- Create a main class TestAbstraction1
- · Create object for the class circle1 and called the method draw

Source Code:

```
TestAbstraction1.java
abstract class Shape{
        abstract void draw();
}
class Rectangle extends Shape
        void draw()
                System.out.println("drawing rectangle");
}
class Circle1 extends Shape
{
        void draw()
                System.out.println("drawing circle");
}
class TestAbstraction1{
        public static void main(String[] args)
                Shape s=new Circle1();
                s.draw();
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
drawing circle
```

class Vehicle {
         void run() {
              System.out.println("Bike is running safely");
        }
} class Bike extends Vehicle {
         public static void main(String[] args) {
              Bike obj=new Bike();
              obj.run();
        }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1 User Output Bike is running safely

ID: 224G1A0597 Page No: 18

Date: 2023-11-07

Aim:

S.No: 16

Write a Java program that implements an interface.

```
Create an interface called <code>Car</code> with two abstract methods <code>String getName()</code> and <code>int getMaxSpeed()</code>. Also declare one <code>default</code> method <code>void applyBreak()</code> which has the code snippet 

System.out.println("Applying break on " + getName());
```

In the same interface include a **static** method [Car getFastestCar(Car car1, Car car2)], which returns **car1** if the **maxSpeed** of **car1** is greater than or equal to that of **car2**, else should return **car2**.

Create a class called BMW which implements the interface Car and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Similarly, create a class called Audi which implements the interface Car and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Create a public class called MainApp with the main() method.

Take the input from the command line arguments. Create objects for the classes BMW and Audi then print the fastest car.

Note:

Java 8 introduced a new feature called default methods or defender methods, which allow developers to add new methods to the interfaces without breaking the existing implementation of these interface. These default methods can also be overridden in the implementing classes or made abstract in the extending interfaces. If they are not overridden, their implementation will be shared by all the implementing classes or sub interfaces.

Below is the syntax for declaring a default method in an interface :

```
public default void methodName() {
    System.out.println("This is a default method in interface");
}
```

Similarly, **Java 8** also introduced **static** methods inside interfaces, which act as regular static methods in classes. These allow developers group the utility functions along with the interfaces instead of defining them in a separate helper class.

Below is the syntax for declaring a static method in an interface :

```
public static void methodName() {
    System.out.println("This is a static method in interface");
}
```

```
ID: 224G1A0597 Page No: 20
```

```
q11284/MainApp.java
package q11284;
interface Car{
        public String getName();
        public int getMaxSpeed();
        public default void applyBreak(){
                System.out.println("applying Break on "+getName());
        }
        public static Car getFastestCar(Car a,Car b){
                if(a.getMaxSpeed()>b.getMaxSpeed())
                return a;
                else
                return b;
        }
class BMW implements Car{
        String name;
        int speed;
        public BMW(String n,String s){
                speed=Integer.parseInt (s);
                name=n;
        public String getName(){
                return name;
        }
        public int getMaxSpeed(){
                return speed;
        }
class Audi implements Car {
        String name;
        int speed;
        public Audi(String n,String s){
                speed=Integer.parseInt(s);
                name=n;
        }
        public String getName(){
                return name;
        public int getMaxSpeed(){
                return speed;
public class MainApp{
        public static void main(String args[]){
                BMW BMW=new BMW(args[0],args[1]);
                Audi audi=new Audi(args[2],args[3]);
                Car max=Car.getFastestCar(BMW,audi);
                System.out.println("Fastest car is : "+max.getName());
        }
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Fastest car is : BMW

	Test Case - 2	
User Output		
Fastest car is : Maruthi

S.No: 24	Exp. Name: program to create a super class called Figure that it returns the area of a rectangle and triangle	Date: 2023-12-14
----------	---	------------------

Write a java program to create a super class called Figure that receives the dimensions of two dimensional objects. It also defines a method called area that computes the area of an object. The program derives two subclasses from Figure. The first is Rectangle and second is Triangle. Each of the sub classes override area() so that it returns the area of a rectangle and triangle respectively

S.No: 25 Exp. Name: Write a Java program demonstrating the usage of Threads

Date: 2023-12-14

Aim:

Write a Java program that uses three threads to perform the below actions:

- 1. First thread should print "Good morning" for every 1 second for 2 times
- 2. Second thread should print "Hello" for every 1 seconds for 2 times
- 3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate **constructor** in the <u>Printer</u> class which implements <u>Runnable</u> interface to take three arguments: **message**, **delay** and <u>count</u> of types **String**, **int** and **int** respectively.

Write code in the <a>Printer.run() method to print the <a>message with appropriate <a>delay and for number of times mentioned in <a>count.

Write a class called ThreadDemo with the main() method which instantiates and executes three instances of the above mentioned Printer class as threads to produce the desired output.

[Note: If you want to sleep for 2 seconds you should call [Thread.sleep(2000);] as the [Thread.sleep(...)] method takes milliseconds as argument.]

Note: Please don't change the package name.

     }
```

public static void main(String[] args) throws Exception {

Thread t1 = new Thread(new Printer("Good morning", 1, 2)); Thread t2 = new Thread(new Printer("Hello", 1, 2));

System.out.println("All the three threads t1, t2 and t3 have

Thread t3 = new Thread(new Printer("Welcome", 3, 1));

package q11349;

public class ThreadDemo {

completed execution.");

}

}

class Printer implements Runnable { String message; int delay,count;

Printer(String a,int b,int c) {

message=a; delay=b;count=c;

count=c;

} }

t1.start(); t2.start(); t3.start(); t1.join(); t2.join(); t3.join();

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Good morning
Hello
Welcome
Good morning
Hello
All the three threads t1, t2 and t3 have completed execution.

Date: 2023-12-14

Aim:

Write a java program to find and replace patterns in a given file. Replace the string "This is test string 20000" with the input string.

Note: Please don't change the package name.

Source Code:

```
q29790/ReplaceFile.java
package q29790;
import java.io.*;
import java.util.*;
class ReplaceFile {
         public static void main(String args[])
                 try
                  {
                         File file = new File("file.txt");
                          BufferedReader reader = new BufferedReader(new
FileReader(file));
                           String line , oldtext=new String();
                            while((line = reader.readLine()) != null)
                                 if(oldtext==null)
                                  oldtext = line + "\r";
                                    oldtext += line + "\r\n";
                              reader.close();
                               System.out.print("Previous string: "+oldtext);
                                // replace a word in a file
                                 //String newtext = oldtext.replaceAll("drink",
"Love");
                                  //To replace a line in a file
                                   String newtext = oldtext.replaceAll("This is test
string 20000", "New string");
                                    System.out.print("New String: "+newtext);
                  }
                   catch (IOException ioe)
                         ioe.printStackTrace();
                    }
 }
```

file.txt

This is test string 20000. The test string is replaced with your input string, check the string you entered is now visible here.

Test Case - 1

User Output

New string

Previous string: This is test string 20000. The test string is replaced with your input string, check the string you entered is now visible here.

New String: New string. The test string is replaced with your input string, check the string you entered is now visible here.

Exp. Name: A java program to demonstrate that the
S.No: 27 catch block for type Exception A catches the exception of type Exception B and Exception C.

Date: 2023-11-09

<u>A</u>im:

Use inheritance to create an exception superclass called Exception A and exception subclasses Exception B and Exception C, where Exception B inherits from Exception A and Exception C inherits from Exception B. Write a java program to demonstrate that the catch block for type Exception A catches the exception of type Exception B and Exception C.

Note: Please don't change the package name.

         public static void main(String[] args) {
                 int n;
                  Scanner sc=new Scanner(System.in);
                  System.out.println("Enter ArrayList length: ");
                   n=sc.nextInt();
                    ArrayList<Integer> arrli=new ArrayList<Integer>(n);
                     System.out.println("ArrayList printing by using Iterator: ");
                       for(int i=1;i<=n;i++){
                        arrli.add(i);
                        for(int i : arrli){
                                 System.out.println(i);
               }
     }
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter ArrayList length:
ArrayList printing by using Iterator:
2
3
4
5
```

```
Test Case - 2
User Output
Enter ArrayList length:
ArrayList printing by using Iterator:
```

Aim: Write a java program(s) that use collection framework classes.(HashTable class) **Source Code:**

```
HashTableclass.java
 import java.util.*;
  import java.io.BufferedReader;
  import java.io.InputStreamReader;
   public class HashTableclass{
         public static void main(String [] args) throws Exception {
                 BufferedReader br = new BufferedReader(new
InputStreamReader(System.in));
                  System.out.print("No.Of Mapping Elements in HashTable:");
                   int hashTableSize = Integer.parseInt(br.readLine());
                    Hashtable<Integer, String> hashTable = new Hashtable<>();
                     for(int i=0;i<hashTableSize;++i){</pre>
                         System.out.print("Rank:");
                          int rankVal = Integer.parseInt(br.readLine());
                           System.out.print("Name:");
                            String nameVal = br.readLine();
                             hashTable.put(rankVal, nameVal);
                      Enumeration keys = hashTable.keys();
                       while(keys.hasMoreElements()) {
                         int nextKey = (int)keys.nextElement();
                          System.out.println("Rank : " + nextKey + "\t\t" + " Name :
    hashTable.get(nextKey));
                            }
```
